DETAILED ACTION

Election/Restrictions

There are TWO species elections in the current application. Applicant must choose one specie from each category. This application contains claims directed to the following patentably distinct species of the claimed invention:

Category #1:

Specie A: One pharmaceutical is compared to a plurality of compounds. (Claim 1)

Specie B: A plurality of pharmaceuticals is compared to a plurality of compounds.
(Claim 1)

Generic to Election #1: Claims 1-25

Justification: When comparing a plurality of pharmaceuticals, phenomena such as drug interaction can affect the said comparison. For an example of drug interaction documented in the literature, see Lamy and Kitler, Diseases of the Nervous System, 1971, vol 32, pp. 17-23. Since this phenomenon is not disclosed in the claims, searching both distinct species provides undue burden.

Category #2:

Specie F: A single model compound is used in the composition. (Claim 1)

Specie G: A plurality of model compounds is used in the composition. (Claim 25)

Generic to Election #2: Claims 1-24

Art Unit: 1631

Justification: When multiple compounds bind to the same drug to form a composition, phenomena such as cooperativity affect how the drug will bind to its target. A common example in the human body is the regulation of oxygen binding to hemoglobin as a result of the binding of metal ions and/or carbon monoxide to the heme-protein. An example is described in the 2005 Encyclopedia Britannica entry for "human blood." Since this phenomenon is not disclosed in the claims, searching both distinct species provides undue burden.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 1631

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
